*Egedal Palletiser* is a newly developed machine for compressing Christmas trees on pallets for economical handling and transport.

- High capacity – only one compression normally needed
- Loading from the sides through doors
- Elevator for loading trees in a horizontal position – minimizing handling, the trees do not have to be turned
- The machine surrounds the trees under the compaction – that way no strain is put on the uprights of the pallet
- Low transport height
- Measurements of the pallet (packed):  
Length x width x height; 240 x 120 x 240 cm
- Measurements of the machine including elevator:  
Length x width x height; 290 x 240 x 235 cm
- Weight: 2100 kg
